

Bursa Malaysia Sustainability Reporting Guide

Environmental (E)

Core environmental disclosures

- Environmental reporting should focus on material impacts, management approach, indicators, and performance data.
- Where climate is material, Main Market issuers should provide climate-related disclosures aligned with TCFD recommendations.
- ACE Market corporations should disclose a basic transition plan toward a low-carbon economy.
- Environmental indicators should be reported consistently across periods using stable definitions, assumptions, and calculation methods.
- At least three financial years of data should be disclosed on a rolling basis for reported environmental indicators.

Energy and emissions

- Energy management indicators should include total energy consumption.
- Energy data should use clear units and a consistent calculation basis across reporting periods.
- Emissions indicators should include Scope 1 and Scope 2 emissions.
- The guide also expects at least selected Scope 3 emissions, such as business travel and employee commuting.
- If climate targets are set, the company should disclose the base year, target year, and progress against target.

Water and waste

- Water indicators should include total volume of water used.
- Waste management indicators should include total waste generated.
- Waste disclosures should distinguish waste diverted from disposal and waste directed to disposal.
- Scoping choices should not exclude facilities or activities with significant environmental impact.
- If environmental data is restated, the company should explain the reason for the restatement.

Environmental management approach

- For each material environmental matter, the company should explain why the matter is important and how it is managed.
- The management approach should describe relevant policies, procedures, actions, and indicators.

- Where relevant, the company should explain implications for business strategy, risk, opportunity, or financial performance.
- Recognised frameworks or standards may be referenced when they improve clarity and comparability.

Social (S)

Core social disclosures

- Social reporting should cover material social impacts, stakeholder concerns, management approach, indicators, and performance trends.
- Stakeholder engagement should support the identification and prioritisation of material social matters.
- At least three financial years of data should be disclosed on a rolling basis for reported social indicators.
- If performance targets are set for social matters, the company should disclose the target and progress against it.

Workforce, diversity, and labour

- Diversity indicators should include employee diversity by gender and age group.
- Diversity indicators should also include director diversity by gender and age group.
- Labour practice indicators should include employee training hours.
- Labour practice indicators should include the proportion of contractors or temporary staff.
- Labour practice indicators should include employee turnover and substantiated human-rights complaints.

Health, safety, and community

- Health and safety indicators should include work-related fatalities.
- Health and safety indicators should include lost time incident rate.
- Health and safety indicators should include employees trained on health and safety standards.
- Community or society indicators should include the total amount invested in the community where beneficiaries are external to the listed issuer.

Supply chain and customer-facing social issues

- Supply chain indicators should include the proportion of spending on local suppliers.
- Supply-chain-related social disclosures may explain how supplier practices, sourcing, or contractor use create social risks or opportunities.

- Data privacy and security indicators should include substantiated complaints concerning breaches of customer privacy.
- Data privacy and security indicators should include losses of customer data.

Social management approach

- For each material social matter, the company should explain why the matter is important and how it is managed.
- The management approach should describe policies, procedures, actions, indicators, and where relevant the business implications of the matter.

Governance (G)

Overall governance expectations

- A listed issuer should publish a Sustainability Statement in its annual report.
- The Sustainability Statement should disclose how the company manages material economic, environmental, and social risks and opportunities.
- The Sustainability Statement should be balanced, comparable, and meaningful.
- The 2022 framework requires common sustainability matters and common indicators across all sectors.

Sustainability governance structure

- The company should disclose the governance structure used to manage sustainability matters.
- The company should identify the governing body responsible for oversight of material sustainability matters.
- Ultimate accountability for sustainability oversight remains with the board even when oversight is delegated.
- The company should disclose who is responsible for strategic management of sustainability matters.
- The company should disclose who is responsible for day-to-day implementation of sustainability plans, tasks, and initiatives.

Scope, basis of scope, and materiality

- The company should disclose the scope of its Sustainability Statement.
- The company should disclose the basis for choosing its reporting scope.
- If the report does not cover all operations, the company should explain inclusions, exclusions, and the reasons for them.

- The company should undertake a materiality assessment to identify and prioritise sustainability matters.
- A sustainability matter is material if it reflects significant economic, environmental, or social impacts.
- A sustainability matter is also material if it substantively influences stakeholder assessments or decisions.

Management approach, targets, and data tables

- For each reported material sustainability matter, the company should explain how the matter is managed.
- The management approach should include relevant policies, actions, and indicators.
- The company is encouraged to set and communicate performance targets for material sustainability matters.
- The performance data table should contain at least three financial years of data for each reported indicator on a rolling basis.
- If historical data is restated, the company should explain the reason for the restatement.

Governance-related indicators and assurance

- Anti-corruption indicators should include training coverage, operations assessed for corruption risk, and confirmed corruption incidents with action taken.
- The company should state whether its Sustainability Statement has been subjected to assurance.
- If assurance is undertaken, the company should disclose the subject matter, scope, and conclusion.
- If independent assurance is undertaken, the company should disclose the assurance provider and the conclusion from the assurance report.
